

HFT

HYDRAULIC, DOWN-ACTING PRESS BRAKE

The Amada logo features a stylized red circle with a white dot inside, followed by the word "AMADA" in a bold, black, sans-serif font.

The HFT Series press brake is a high-speed, down-acting system with construction features that ensure accurate and consistent performance

Lower bed design ensures optimal deflection characteristics to provide angular accuracy over the length of the bend

The CD 2002 is an easy to use, microprocessor based controller providing total control over the bending process. Programming modes include depth (teach) and direct angle input.

A magnetic base lets the operator position the CD2002 wherever convenient.

Standard RS232C port allows offline program and set-up information storage using Amada's BendCOM software.
